

MOON MAP

Can you find the rabbit in the moon?

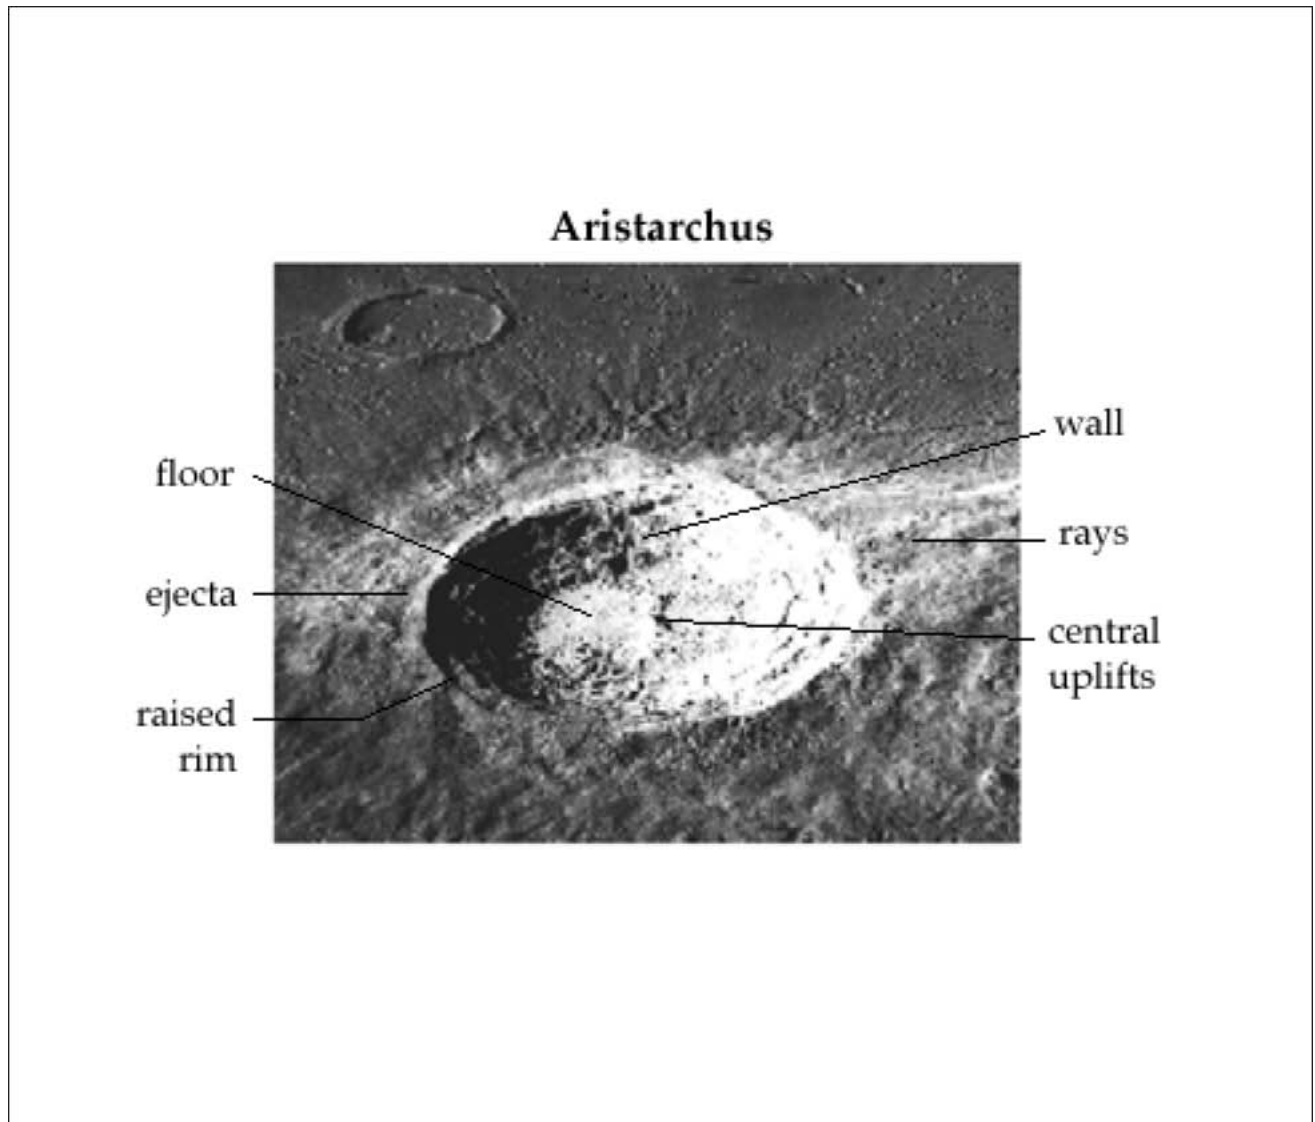

Remember the planets in the sky!

For more information on craters and access to all the images you've seen:

The Parts of a Crater

Floor – Bottom of a crater, sometimes bowl-shaped, sometimes flat

Central peak – A “mountain” in the central area of the floor of very large craters

Walls – Interior sides of a crater (usually steep)

Rim – Edge of the crater hole. Usually raised

Ejecta – Material thrown out of the crater area during an impact event

Rays – Bright streaks extending away from the crater, sometimes for great distances, made of ejecta material
